

What is GeneTalk?

GeneTalk combines a web-based tool for filtering and analyzing human sequence variants and a professional online network for geneticists worldwide.

Clinicians and scientists looking for information about specific sequence variants can find other users with expertise for a particular variant.

GeneTalk offers three kinds of licenses

Basic License

You can register for free at www.gene-talk.de

The basic license is suitable for getting to know GeneTalk, read and write annotations, and be part of the GeneTalk community.

Premium License

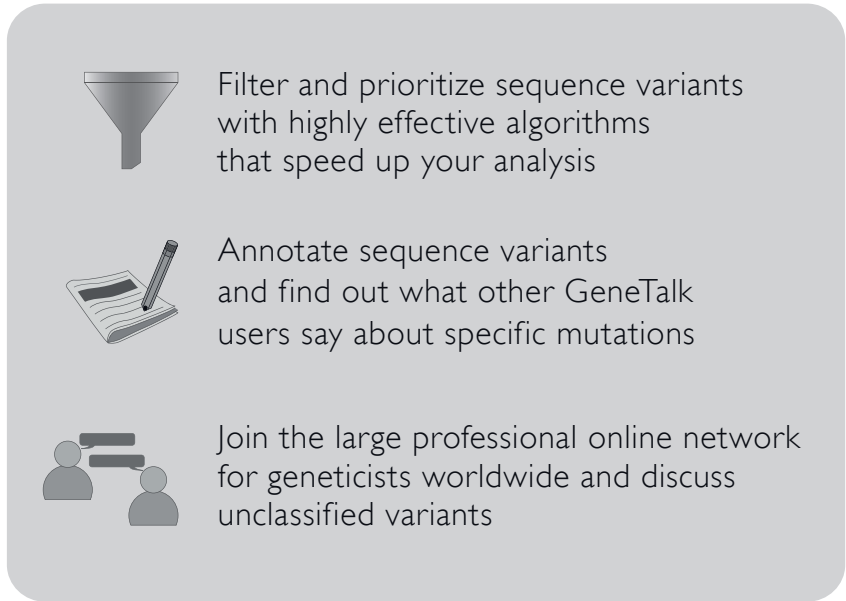

To get the full power of GeneTalk, you will need a premium license. With a premium license, you have unlimited access to all GeneTalk features and technical support.

In-House Solution*

If your institute's/company's policy forbids transmitting patient data via internet or storing annotations outside your intranet, you can use GeneTalk's *in-house solution*.

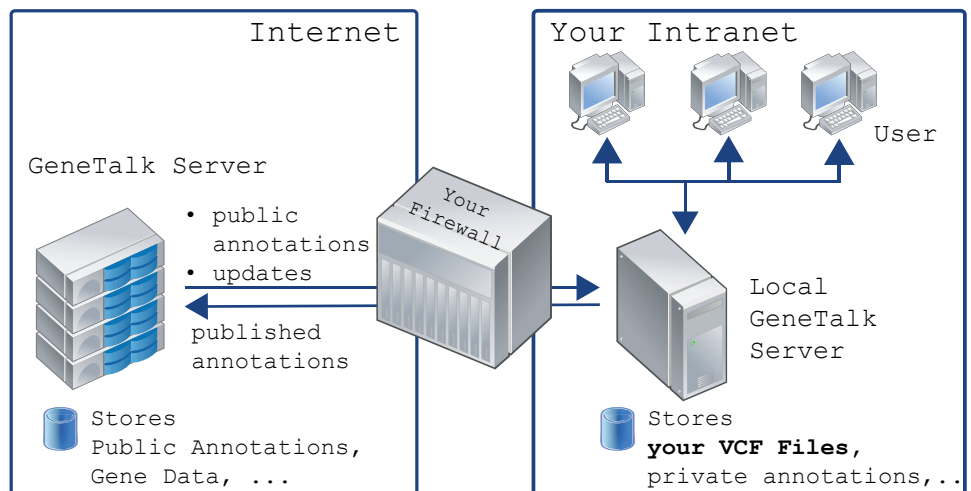

You will get your own server running GeneTalk, so that all your data will be kept inside your intranet. This local server communicates with the main GeneTalk server only to get up-to-date public data and software updates.

-  Filter and prioritize sequence variants with highly effective algorithms that speed up your analysis
-  Annotate sequence variants and find out what other GeneTalk users say about specific mutations
-  Join the large professional online network for geneticists worldwide and discuss unclassified variants

-  **Basic**
 - Analyze and discuss human sequence variants
-  **Premium**
 - Unlimited data upload and filtering
 - High processing speed
 - Technical support
 - Advanced training
-  **In-House Solution**
 - Get your own GeneTalk server
 - Keep all your data inside your intranet
